

Example: 1900 UTC 30 May

1) For each year, 1979–2014, compile the 1-h forecast of 2-m air temperatures valid at 1900 UTC within a 21-day window centered on 1900 UTC 30 May in the CFSR.

2) Calculate the 2-m air temperatures that corresponds to the 99th percentile at that date and time for each grid point in the CFSR.
