ENVIRONMENTAL SCIENCE PROGRAM

in the

Department of Atmospheric and Environmental Sciences
Bachelor of Science Degree in Environmental Science

Addressing environmental problems from a scientific perspective is becoming ever more important in today’s world. We are faced with an increasing number of environmental challenges such as air pollution, water and soil contamination, climate change, land degradation and loss of biodiversity. Training the next generation of environmental scientists is therefore a mission of critical importance. The B.S. degree in Environmental Science at the University at Albany offers an excellent education and training in these areas and prepares our students for a successful career with governmental or non-governmental organizations, environmental consulting firms or graduate school. Our faculty members are engaged in world-class research relevant to the needs of society and focusing on a wide variety of aspects within the earth system, including research on planetary, atmospheric, hydrologic, cryospheric and terrestrial processes. Our students are also required to take some classes in the Geography and Biology Departments, where they are exposed to biologic and ecologic aspects of environmental science and are trained in computer mapping and Geographic Information Systems (GIS).

The Environmental Science Program at the University at Albany is housed in the Department of Atmospheric and Environmental Sciences. It is one of two undergraduate programs offered by our department, the other one being the B.S. degree in Atmospheric Science. The Department also has an internationally recognized graduate program, offering both Masters and PhDs in Atmospheric Science.

Environmental Science Programs around the country vary significantly regarding their main focus and emphasis toward certain aspects of the environment. While some Departments emphasize Environmental Policy, Environmental Health, Environmental Law or Ecology, the strength of our program lies in its core emphasis on the Natural Sciences. Our students are required to take two semesters of calculus, physics and chemistry which give them a very solid foundation to understand and analyze the natural processes that dominate our environment. We also encourage all our Environmental Science students to acquire some working experience by serving as an intern with an environmental consulting firm or a local, state or federal agency. The students earn credit for the internship, but it also gives them a valuable working experience with a potential future employer. Hence our students graduate with a competitive advantage in the job market for all positions that require work experience, a solid scientific background and advanced quantitative skills.

Our research and teaching facilities are among the most advanced in the nation. We maintain a fully equipped electronic map room with satellite, radar, observation, lightning detection, and model forecast data from around the world. This room is used for teaching and for weather discussions, but also serves as a lab with many Linux/Windows workstations. Students are encouraged to use the room as a group or individual study area.

We also host a world-class Stable Isotope Ratio Mass Spectrometer (SIRMS) Laboratory where students can perform undergraduate research and learn how to analyze past climate variations using corals, plants, soils, etc.
Requirements for the B.S. Degree in Environmental Science

Students planning to study environmental science should have a good academic preparation in physics, chemistry and mathematics. The core program consists of two semesters of chemistry, mathematics and physics and introductory courses in Environmental and Atmospheric Science, Biology, Geology and Geography. All students have to complete a core program of 45 credits and then select one of three specializations (21 additional credits): Biology, Climate Change, or Geography. Each specialization represents an emphasis within the overall program that would best match a student's interest and desired career path. For example, those most interested in studying the climate–environment system would opt for the Climate Change specialization, while those seeking careers in land use planning and geographic information systems might opt for the Geography specialization. Correspondingly, students keen on aspects of biological processes and ecology would select the Biology specialization.

Courses offered:

Core:
- ATM 210: Atmospheric Structure, Thermodynamics, and Circulation
- ATM/ENV 315: Environmental Statistics
- ATM/ENV 327: Meteorological and Environmental Measurements
- BIO 120: General Biology I (+ Lab I)
- BIO 121: General Biology II (+ Lab II)
- BIO 320: Ecology
- CHM 120 or 130 or T CHM 130: General Chemistry I or Advanced General Chemistry I
- CHM 121 or 131 or T CHM 131: General Chemistry II or Advanced General Chemistry II
- ENV 105: Introduction to Environmental Science
- ENV 106: Environmental Science Laboratory
- ENV 302: Ocean Science
- ENV 490: Major Topics in Environmental Science
- GEO 221: Understanding the Earth
- MAT 111 or 112 or 118 or T MAT 118: Algebra and Calculus II, Calculus I or Honors Calculus I
- PHY 140 or 141 or T PHY 141: Physics I: Mechanics or Honor Physics I: Mechanics

Geography Specialization (22 credits):
Required courses
- GOG/PLN 220: Introductory Urban Geography
- GOG 290: Introduction to Cartography
- GOG 490: Geographic Information Systems (GIS)

A sample of electives:
- GOG 304: Climatology
- GOG 330: Principles of Environmental Management
- GOG 344: World Population
- GOG 354: Environment & Development
- GOG 375: Methods of Urban Analysis
- GOG 414: Computer Mapping
- GOG 430: Environmental Planning
- GOG 460: People, Place, and Power
- GOG 484: Remote Sensing I
- GOG 485: Remote Sensing II
- ENV 250: Environmental Sustainability
- ATM 405: Water and Climate Change
- ATM 301: Hydrology and Hydrometeorology

-continued on next page-
Climate Change Specialization (21 credits):
Required courses:
   ATM 306: Climate Variability and Change
   ATM 405: Water and Climate Change
   ATM 415: Climate Laboratory
   ATM 450: Paleoclimatology
A sample of electives:
   ATM 301: Hydrology and Hydrometeorology
   ATM 304: Air Quality
   ATM 307: Introduction to Atmospheric Chemistry
   ATM 335: Meteorological Remote Sensing
   ATM 413: Weather, Climate Change, and Societal Impacts
   ATM 414: Air Pollution Meteorology
   RPAD 366: International Environmental Policy
   RPOS 266: International Political Economic Science

Ecosystems Specialization (22 credits):
Required courses:
   BIO 212: Introductory Genetics
   BIO 327: Experimental Ecology
   BIO 402: Evolution
A sample of electives:
   ANT 418: Culture, Environment, and Health
   ANT 419: Human Evolutionary and Environmental Physiology
   ATM 301: Hydrology and Hydrometeorology
   BIO 308: Parasitic Diseases and Human Welfare
   BIO 311: World Food Crisis
   BIO 329: Genetics of Human Disease
   BIO 343: Evolutionary Biology and Human Health
   BIO 427: Grazing in Terrestrial Ecosystems
   ENV 250: Environmental Sustainability
   HSPH 321: Global Environmental Issues and Their Effect on Human Health
   HSPH 323: Environmental Laboratory Perspectives in Public Health
   HSPH 332: Epidemiology and Biostatistics

Sustainability Science and Policy (21 credits):
Required courses:
   ATM 304: Air Quality
   ENV 250: Environmental Sustainability
   RPOS 399: Selected Topics in Political Science and/or Public Policy
A sample of electives:
   ANT 418: Culture, Environment, and Health
   ATM 405: Water and Climate Change
   ATM 413: Weather, Climate, and Societal Impacts
   BIO 311: World Food Crisis
   GOG 220: Introductory Urban Geography
   GOG 344: World Population
   GOG 430: Environmental Planning
   GOG 460: People, Place and Power
   RPAD 366: International Environmental Policy
   RPOS 266: International Political Economic Science
   HSPH 321: Global Environmental Issues and Their Effect on Human Health
   HSPH 323: Environmental Laboratory Perspectives in Public Health
   HSPH 332: Epidemiology and Biostatistics
The Environmental Science B.S. is a combined major-minor (i.e. has a "built in" minor due to the required foundation coursework). Although no minor is required for those majoring in Environmental Science, some students do choose to add an additional minor, or minors. Some common choices are Geography and Planning, Biology, Atmospheric Science, Business, and Sustainability. Some students also choose to “double major” with any of the aforementioned programs.

The department also offers a Bachelor of Science degree in Atmospheric Science. This degree provides a more specialized education in meteorology and weather forecasting for students interested in atmospheric processes. Additional information on the Atmospheric Science degree is given in a separate brochure.

**Typical B.S. Program in Environmental Science**

*Note that this is an example for the climate change specialization; the required specialization courses (ATM 306, 405, 415, 450) would be different for the other 3 concentrations.*

**Courses required for this major are shown in bold**

Undergraduate Internship and Research Opportunities

Internships: Our Environmental Science students have the possibility to pursue an internship with a local, state or federal government agency or with a private consulting firm. This internship opportunity is open to all junior and senior year students who have a GPA of at least 2.5 in both their major and overall and can be repeated once. These internships provide students with practical work experience in environmental science and allow them to make contacts with potential future employers. It is the student’s responsibility to line up the internship but our faculty regularly help with the search by disseminating information regarding current opportunities to students and by directing students toward useful resources and databases of potential employers.

Research: Stimulating and attractive research opportunities exist for our undergraduates. This research, supervised by a department instructor should be done at the beginning of the senior year and can be repeated once for credit (A ENV 498). It requires approval of both the instructor and the chair. In some cases, students work on a faculty member’s ongoing research project, but students are also encouraged to come up with their own ideas. More information on the types of research covered by our faculty can be found beginning on page 7.

Graduate Program

Our department does not offer advanced degrees in environmental science but has an active graduate program, offering Ph.D. and M.S. degrees, in atmospheric science. This program is viewed to be one of the top atmospheric science programs in the country. A multitude of prominent research in the field has come from graduate work at UAlbany, and many of our graduates are now employed at the top research and teaching institutions in the world. Several of our environmental science students have applied and been accepted to our atmospheric science graduate program in the past.

Careers

Graduates with a B.S. in Environmental Science will be well qualified for a broad range of positions within the highly interdisciplinary field of environmental science. Consulting firms, industry, federal and state government agencies all require employees with this type of training. The demand for individuals with such a degree is anticipated to remain strong as our society attempts to cope with and address a myriad of environmental impacts that are occurring on local, regional, national and global scales. Additionally, graduates with this degree are well prepared to consider advanced degrees in the sciences, or other fields such as business administration (M.B.A.) or law (J.D.). In fact many of our undergraduate degree recipients advance to graduate study.
Our Faculty

Members of the Department of Atmospheric and Environmental Sciences are funded externally by agencies such as the National Science Foundation (NSF), the National Aeronautics and Space Administration (NASA), the Office for Naval Research (ONR), the National Oceanic and Atmospheric Administration (NOAA), the Air Force Office for Science Research (AFOSR) and others. Research interests of the Faculty teaching in the Environmental Science program include:

Climatology / Climate Change / Paleoclimatology
- Dr. Aiguo Dai
- Dr. Oliver Elison Timm
- Dr. Jiping Liu
- Dr. Brian Rose
- Dr. Mathias Vuille
- Dr. Liming Zhou

Tropical Meteorology
- Dr. Paul Roundy
- Dr. Brian Tang
- Dr. Christopher Thorncroft
- Dr. Mathias Vuille

Physical Meteorology
- Dr. Vince Idone
- Dr. Justin Minder
- Dr. Junhong Wang

Atmospheric Chemistry
- Dr. Robert Keesee

Remote Sensing
- Dr. Liming Zhou

Glaciology and Hydrology
- Dr. Mathias Vuille

Climate modeling
- Dr. Oliver Elison Timm
- Dr. Brian Rose
