Figure 8.10. Photograph of the central part of the Nyainqentanghla from near Yangbajian showing prominent dipslopes (view to the north). The slope dip at an angle of  $\sim 15$  to  $25^\circ$  to the SE and are made up of mylonitic granitic gneisses. Photo by W.S.F. Kidd.

**Figure 8.13.** Photograph of a leucocratic dike and calc-silicate gneiss in the Goringla Valley of the Nyainqentanghla. The dike has a foliation which is weaker but similar in orientation to the country rock.
