PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 16.63 to 78.76 Ma

First Search: peaks with zero first derivatives.

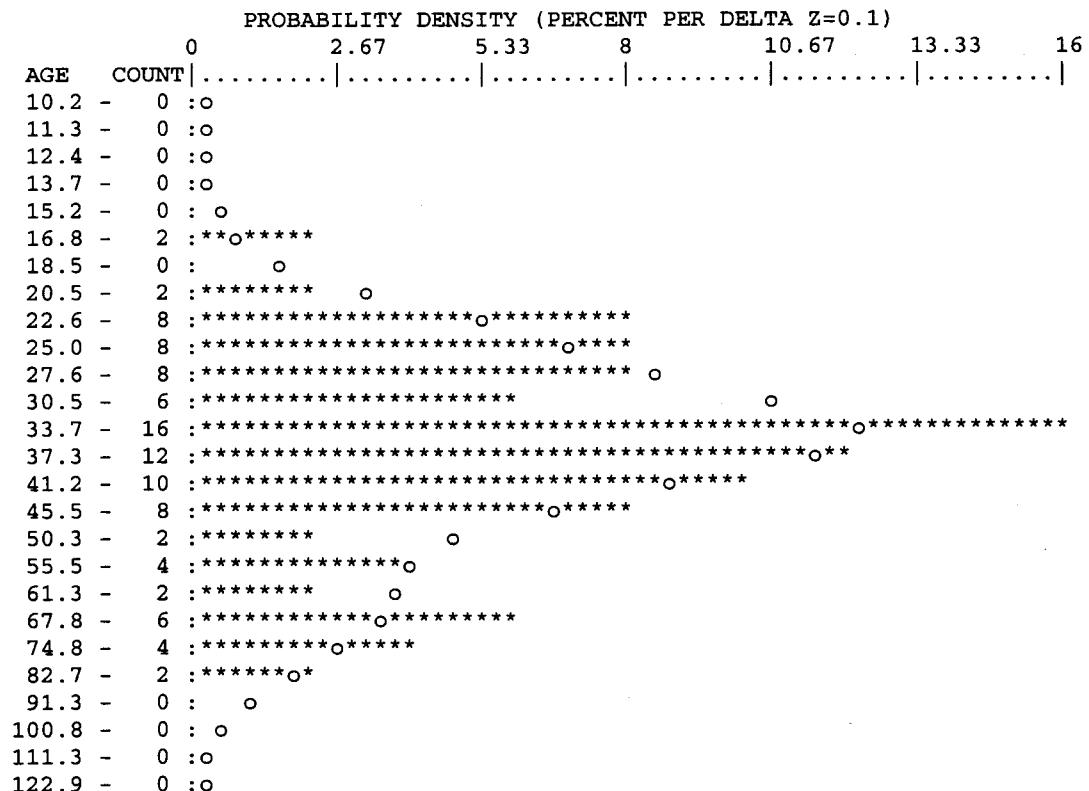

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
34.33	6.211	38.13

Second search: find minima in the second derivative of the Gaussian probability density function.

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
14.90	0.231	1.42

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 19.29 to 108.43 Ma

First Search: peaks with zero first derivatives.

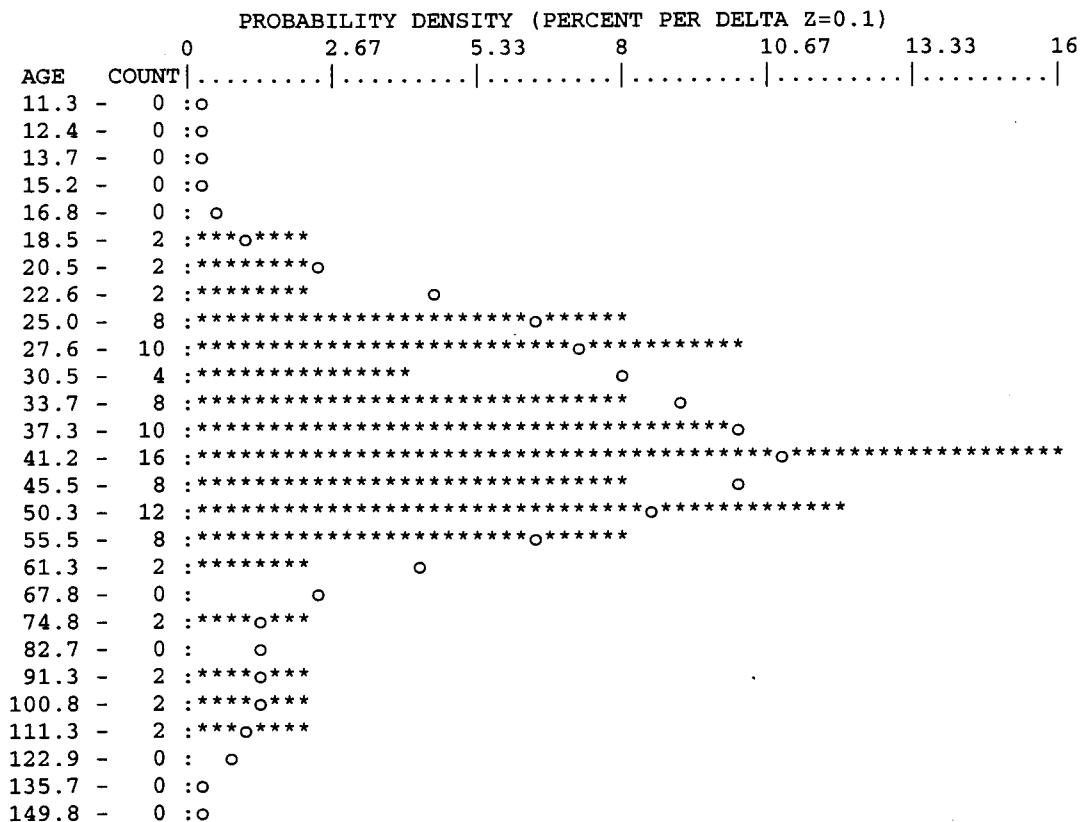

AGE (Ma)	PROBABILITY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
41.14	5.479	34.24
98.64	0.703	4.39

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 21.22 to 70.36 Ma

First Search: peaks with zero first derivatives.

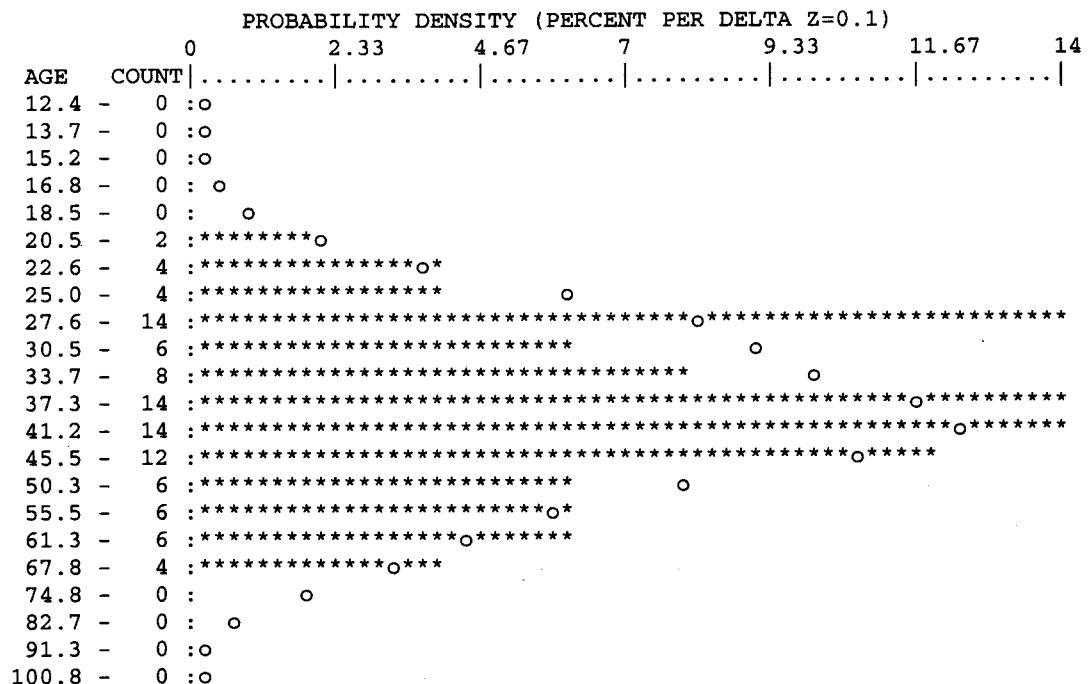

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
40.59	6.215	37.65

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 13.99 to 91.50 Ma

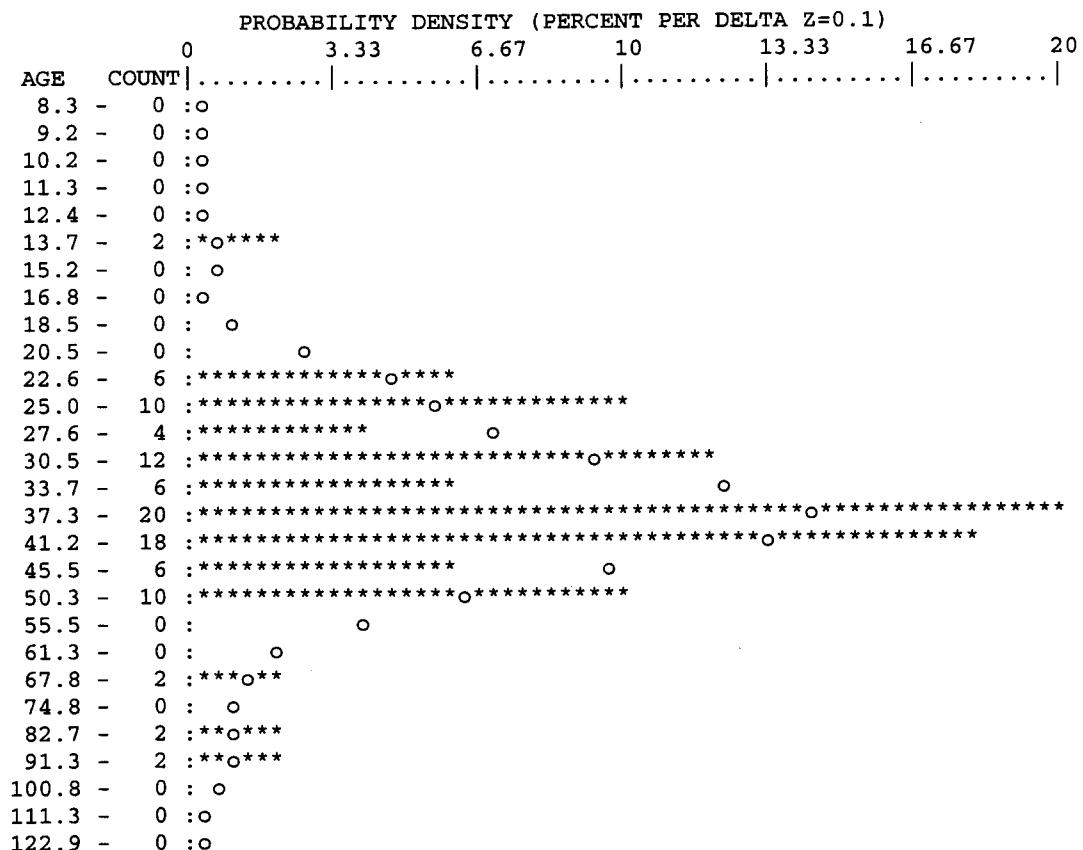

First Search: peaks with zero first derivatives.

14.10	0.289	1.61
37.93	7.232	40.28
87.41	0.544	3.03

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 19.74 to 86.55 Ma

First Search: peaks with zero first derivatives.

AGE (Ma)	PROBABILITY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
37.21	5.119	31.42

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 24.58 to 80.43 Ma

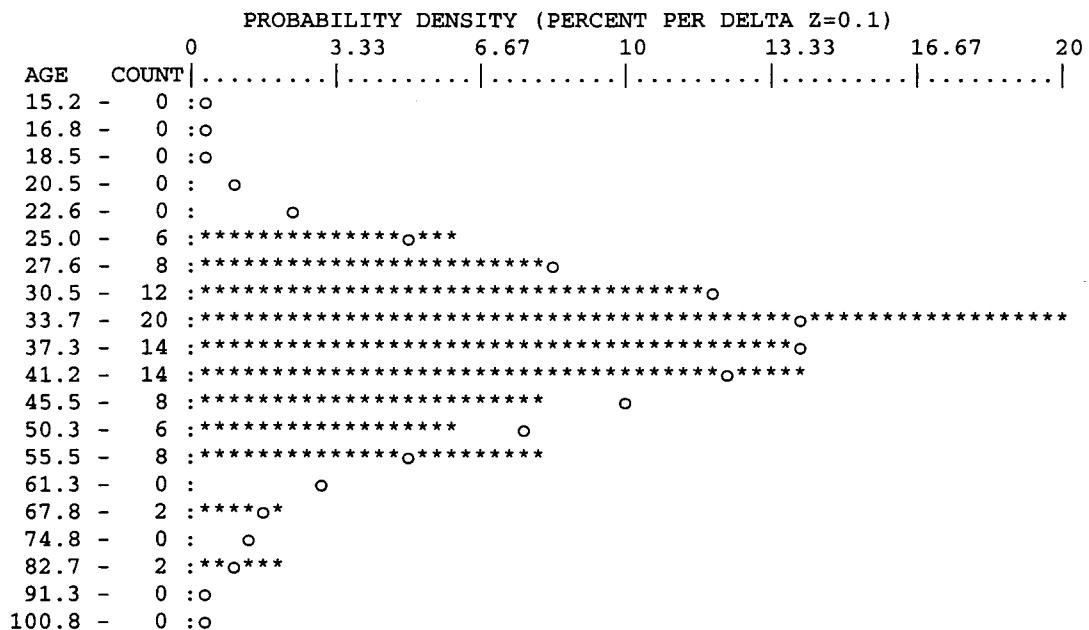

First Search: peaks with zero first derivatives.

AGE (Ma)	PROBABILITY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
35.18	7.169	46.07

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 6.09 to 113.53 Ma

First Search: peaks with zero first derivatives.

20.54	3.421	18.85
38.58	2.640	14.55

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 8.26 to 90.53 Ma

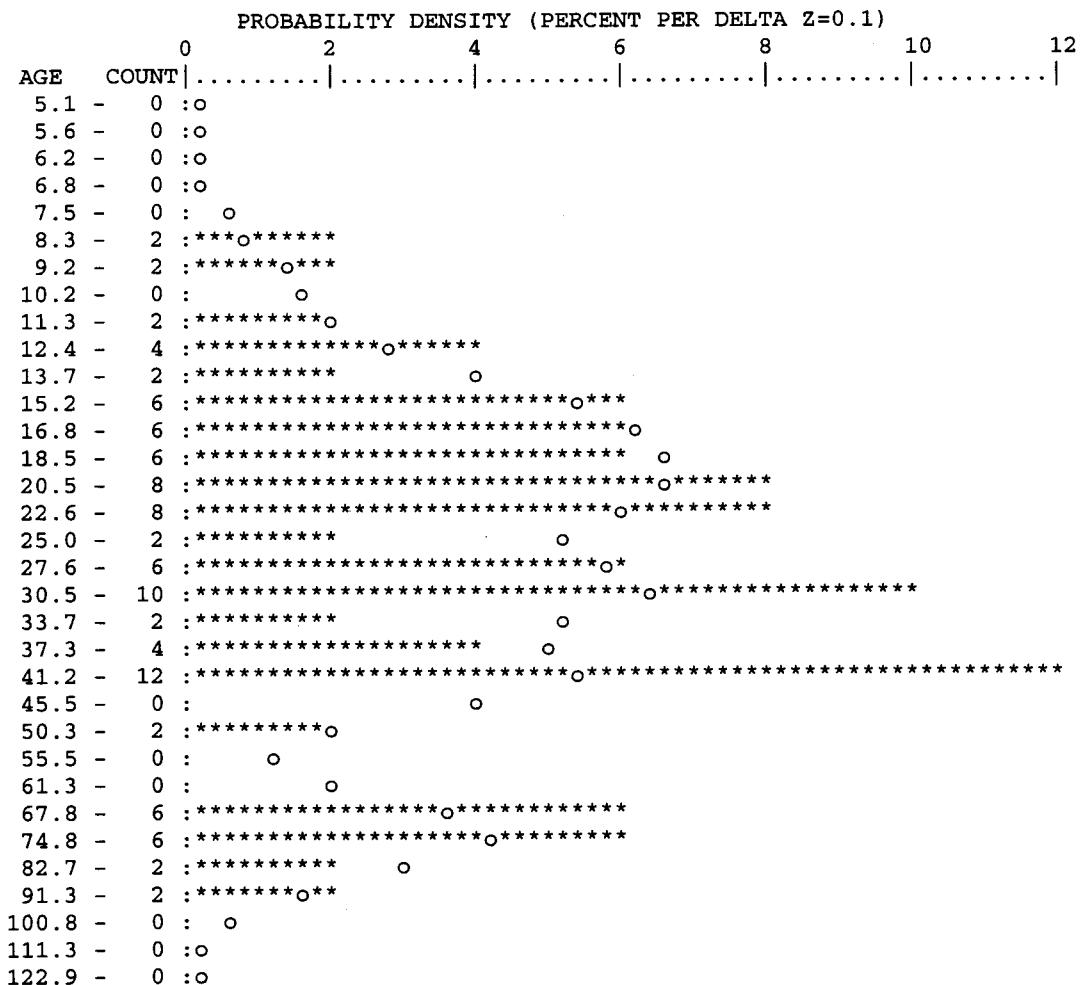

First Search: peaks with zero first derivatives.

AGE (Ma)	PROBABILITY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)

30.07	3.208	16.96
40.64	2.675	14.15
73.13	2.125	11.24

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 4.26 to 113.89 Ma

First Search: peaks with zero first derivatives.

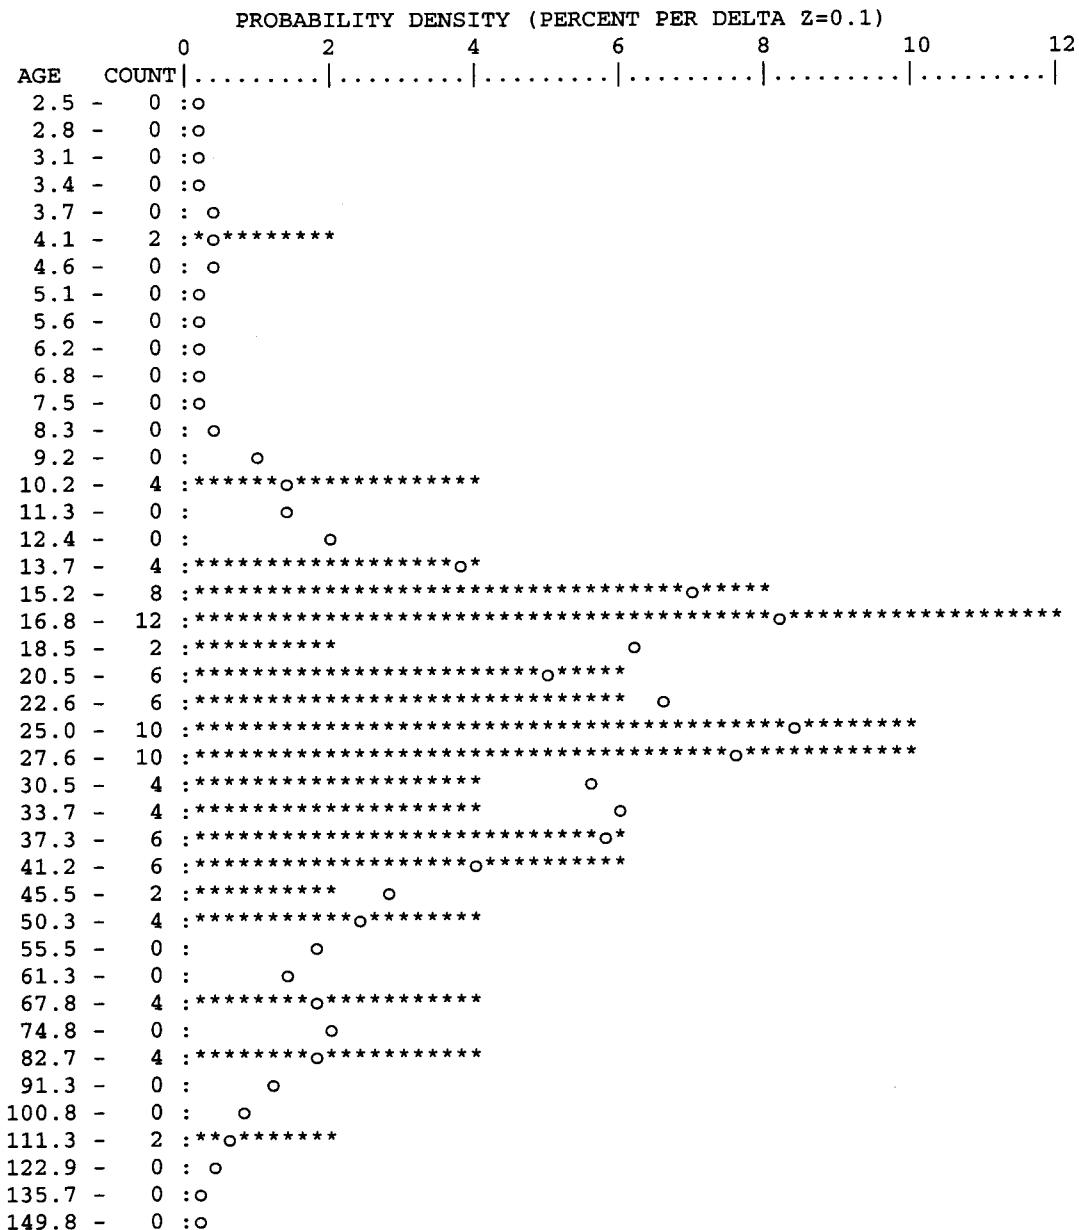

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
4.26	0.223	1.12

25.68	4.247	21.24
35.51	3.094	15.47
77.02	1.006	5.03

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 12.43 to 113.79 Ma

First Search: peaks with zero first derivatives.

30.53	5.249	27.01
70.14	0.939	4.83

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 17.73 to 73.31 Ma

First Search: peaks with zero first derivatives.

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
34.72	5.537	32.47

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 22.24 to 91.47 Ma

First Search: peaks with zero first derivatives.

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
37.49	4.902	30.87

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 18.64 to 66.44 Ma

First Search: peaks with zero first derivatives.

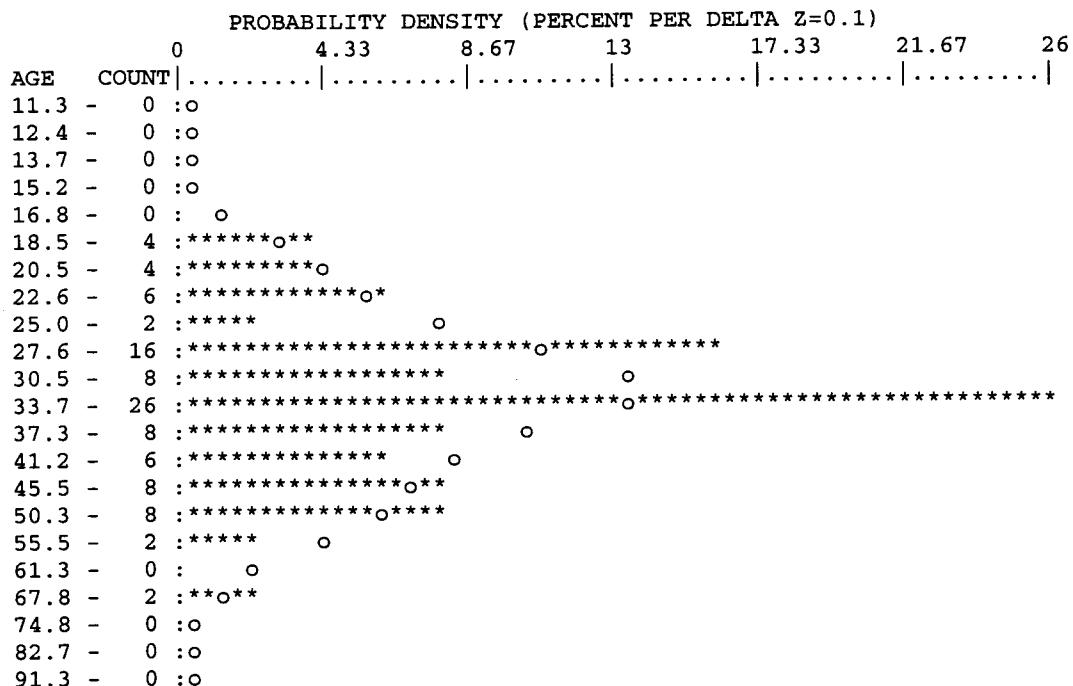

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
32.02	6.879	44.75

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 21.82 to 79.85 Ma

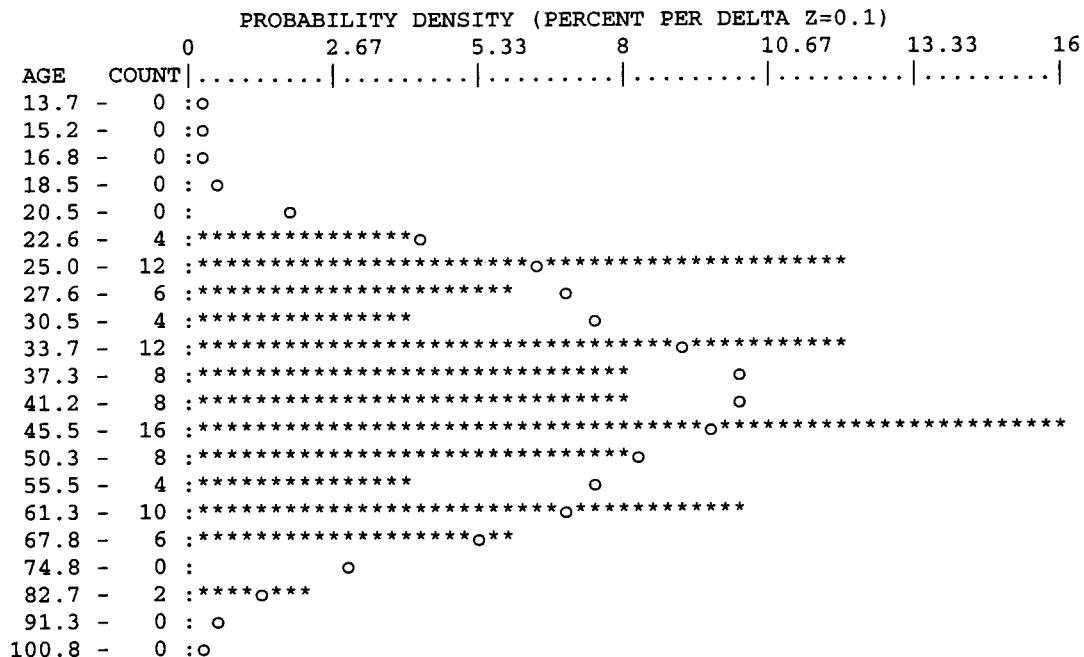

First Search: peaks with zero first derivatives.

AGE (Ma)	PROBABILTY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
39.24	5.068	27.87

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 21.98 to 77.24 Ma

First Search: peaks with zero first derivatives.

AGE (Ma)	PROBABILITY DENSITY AT PEAK (grains/DZ=0.1)	EST. N (grains)
32.30	5.659	30.80

Second search: find minima in the second derivative of the Gaussian probability density function.

PEAKS IN PROBABILITY DISTRIBUTION

The modes in the distribution are found by inspecting the derivatives of the probability density as a function of Z.

Probability distribution uses grain-only standard errors.

Total probability mass integrates to N (= number of grains).

Probability density is given as grains per delta Z=0.1.

At 50 Ma, delta Z=0.1 is equivalent to a time interval of 5 m.y.

Total range for grain ages = 15.68 to 77.79 Ma

First Search: peaks with zero first derivatives.

19.37	1.130	5.89
36.58	5.797	30.24
45.67	6.843	35.70

Second search: find minima in the second derivative of the Gaussian probability density function.
