

Geologic Map of the southern HGZ, Colonie

Explanation

Structural Units

- Melange
- coarse greywacke } bedding dips < 50° and to SE
- finer greywacke }
- vertical bedding
- various attitudes of bedding, locally disrupted

Contacts (all inferred)

- sedimentary
- trace of fold axial plane
- faulted (within bedded greywacke)
- tectonic (to surrounding melange)
- bedding (younging direction uncertain)
- bedding, east younging (normal)
- vertical, bedding (younging direction uncertain)
- vertical bedding, west younging
- horizontal bedding
- weak slaty cleavage (fold axial plane)
- outcrop with number
- graptolite locality (Ruedemann 1912, 1930, Berry 1962, 1977, Rickard & Fisher 1973)
