South American Monsoon System

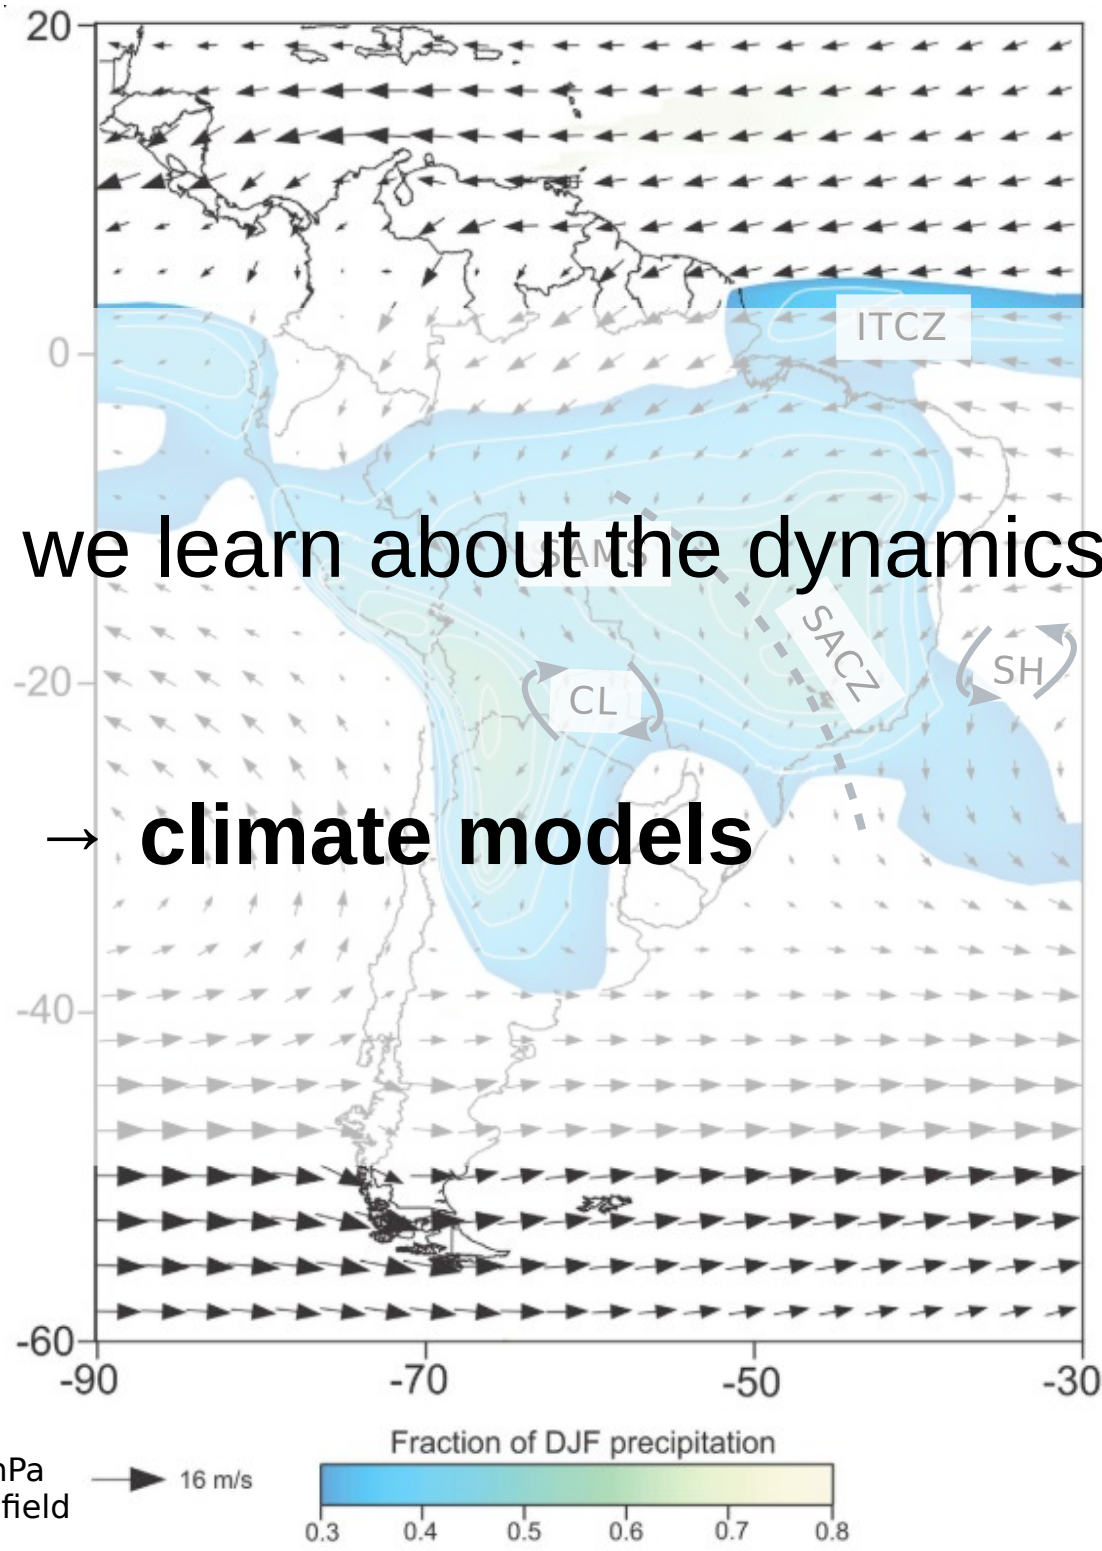

- How can we learn about the dynamics of this system?
- How do we contextualize current and future changes in the system?

Adapted from
Novello et al., 2016

- How can we learn about the dynamics of this system?

→ **climate models**

850 hPa
wind field

→ 16 m/s

Adapted from
Novello et al., 2016

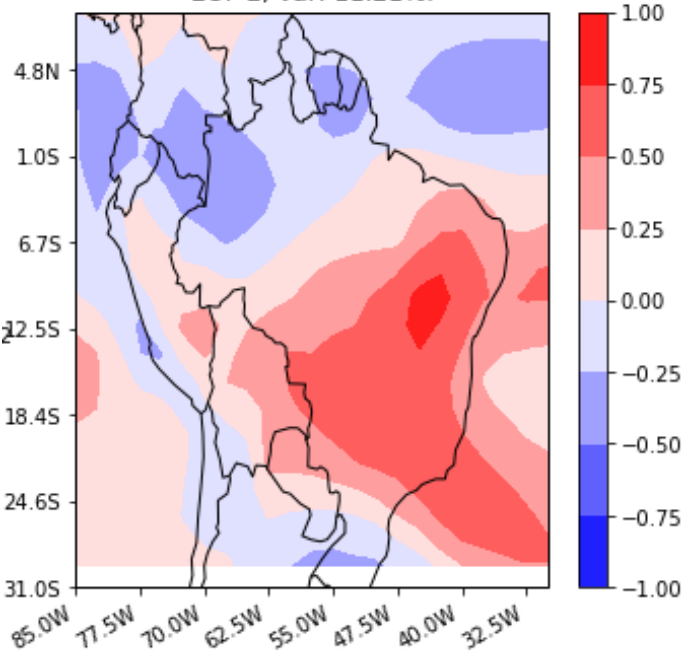

NASA

Precipitation [CESM-LME; full forcing]

EOF 1; var: 33.88%.

EOF 2; var: 11.21%.

- How do we contextualize current and future changes in the system?

→ **paleoclimatic data**

Proxy Records

Summary:

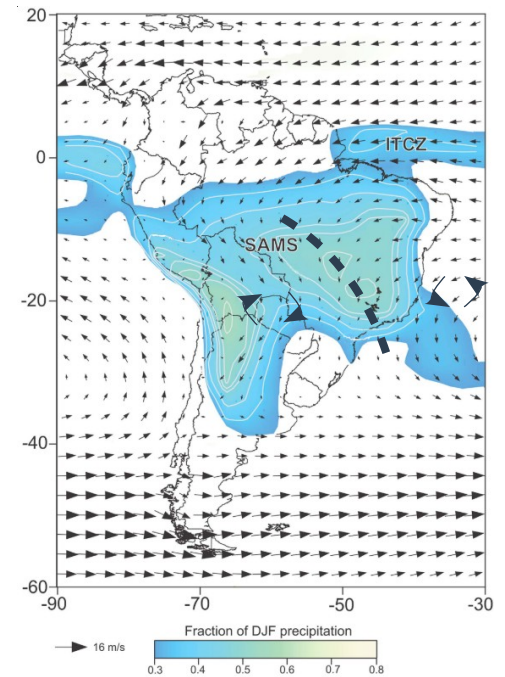

Understanding the system contextualized by the past...

+

=

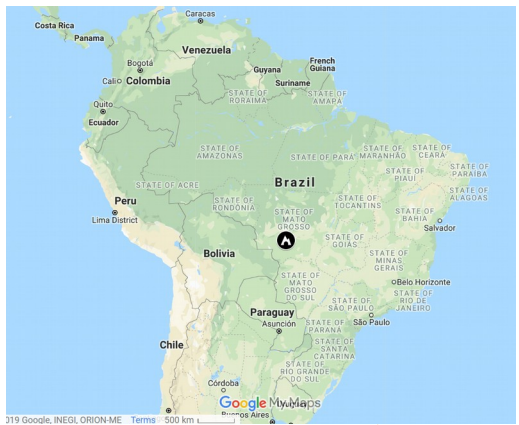

...we look to the future

Thank you!

Last Millennium Ensemble details:

- ▶ Greenhouse gases: transient 850 – 2005 [3] (Schmidt et al. 2011)
- ▶ Land cover/land use: transient 850 – 2005 [3] (Pongratz et al. 2008, Hurtt et al. 2011)
- ▶ Ozone-Aerosols: transient 1850 – 2005 [2] (Schmidt et al. 2011)
- ▶ Solar Insolation: transient 850 – 2005 [4] (Vieira et al. 2011)
- ▶ Orbital: transient 850 – 2005 [3] (Berger 1978)
- ▶ Volcanic eruptions: transient 850 – 2005 [5] (Gao et al., 2008)
- ▶ Unless noted, other forcings in single forced runs set to fixed 850 values, ozone-aerosols fixed at 1850 levels. No volcanic forcing outside volcanic forced run.
