

ATM 400 – Problem Set #1

Due Date: Tuesday 4 September 2009

Fall 2009

This assignment will allow you to become familiar with the American Meteorological Society (AMS) journal archives and help you when it comes time to do the literature review for your semester-length project

Assignment:

Do an AMS journal search (<http://ams.allenpress.com/perlserv/?request=search-simple>) for any topic that intrigues you and do the following:

1. List at least five publications in standard AMS format that deal with the topic.
See the course webpage or AMS website for the AMS author guide.
2. Choose one publication from your list that you are most interested in and discuss why. You should limit your discussion to **one** double spaced page written in paragraph form. One possible format could be to have a one paragraph synopsis of the paper followed by a second paragraph describing what intrigued you the most.

Note:

The AMS journal webpage does **not** automatically put references into standard AMS format.
