

Sense of ductile shear

- dextral
- sinistral
- thrust
- normal
- reoriented; normal to thrust
- reoriented; thrust to sinistral
- reoriented; normal to dextral

Orientations of ductile foliation, lineation, and shear sense determinations in different localities of the Namche Barwa structure. [shear sense relative to present orientation - red: reverse, green: normal, magenta: left-lateral, blue: right-lateral; black: not determined] for shear sense items where reorientation by later strain has inverted or changed the original slip sense, the center colour gives the original sense and the outer ring the present apparent sense. Lower hemisphere, equal-angle stereographic projections
